Žakula, R., 223

Keyword Index to Volume 4

Aggregation of molecules, 17
Amplifiers, 119
Arithmetics, 67
Asynchronous neuronal logic, 67

Band mobility, 79
Bistable materials, 5
Bound water, 57
Burst operations, 67

Charging energy-limited tunneling, 161
Coincidences, 67
Conducting polymers, 167
Conjugated polymers, 37
Control of quantum systems, 125
Coordination device, 17

Delay operations, 67
Diodes, 201
Discrete models of continuous time computations, 67
Dispersive transport, 79
DMET, 173

Effective medium approximation, 79
Emeraldine, 161
Energy relaxation, 79
Enzyme iummunoassay, 111
Excimer, 149
Exciton, 149, 187
Excitons, 79

Fab'-SH, 111
Field effect transistor, 119
Field-dependent trapping, 79

Germanium, 201
Glow-discharge treatment, 111
Granular metal, 161

Heisenberg Hamiltonian, 181
High T_c superconductors, 193
High-field transport, 79
High-spin molecule, 181
Hopping transport, 79

Hot luminescence, 187
Hubbard Hamiltonian, 181
Hyper-polarizability, 31

IgG, 111
Information processing, 57
Insulator–metal transition, 161
Iodoform complexes, 25

Landauer formula, 125
Langmuir–Blodgett films, 201
Local electric field, 31

Membranes, 57
Meta-nitroaniline, 31
Metal acid phthalates, 25
Metal complex, 17
Metal–insulator–semiconductor, 201
Mobility edge, 79
Molecular crystals, 31
Molecular devices, 119
Molecular organization, 47
Molecular snap, 17
Molecular switch, 125
Multi-phonon processes, 79

Negative resistance, 119
Neurones as measuring devices, 67
10, 12-nonacosadiynoic acid, 201
Non-linear optics, 31
Nonlinear properties, 25

One-dimensional effects, 79
One-dimensional system, 17
Onsager generation, 79
Optical logic devices, 5
Opto-electronics, 31
Ordering, 47
Organic conductor, 173
Organic ferrimagnet, 181
Organic ferromagnet, 181
Organic films, 47
Organic superconductor, 173
Organic–inorganic halides, 25

Parallel processing, 5

Parquet theory, 193
α-perylene, 149
Photoconductivity, 79
Plasma polymerization, 111
Polar crystals, 25
Polarons, 79, 161
Polyacetylene, 167
Polyaniline, 161
Polymer single crystals, 119
Protein immobilization, 111
Pyrene, 149

Quantum-mechanical tunnelling, 119

Raman scattering, 167
Refractory cycle and operations, 67

SDW (spin density wave), 173
Selective coordination epitaxy, 17
Self-trapping barrier, 149, 187
Self-trapping, 149
Semiconductors, 37
Sensors, 119
Solitons, 79
Spin alignment, 181
Spin and charge density waves, 193
Stark localization, 79
Subadditivity, 67
Superconductivity, 57

Tailored molecular structure, 17
Threshold materials, 5
22-tricosenoic acid, 201
Topological symmetry, 181
Transfer matrix, 119
Transitional gates, 67

Unsymmetrical donor, 173
Urea, 31

Van Hove singularities, 193
Velocity saturation, 79
Vibrational properties, 167

X-ray photoelectron spectroscopy, 111
